# GLOBAL LOGISTICS

## Global Ocean Services

H&P Logis Japan provides various global ocean services and also leads into the best environment, through multimodal transportation system service which complies with the environment of the product and logistics consulting service that is suitable for customer needs.

## Transportation Services

We deliver all types of goods, from LCL Cargo to Project Cargo, to absolutely anywhere, and we will happily talk clients through each stage of the freight forwarding process to ensure clients feel well informed and confident about how their freight will be delivered.

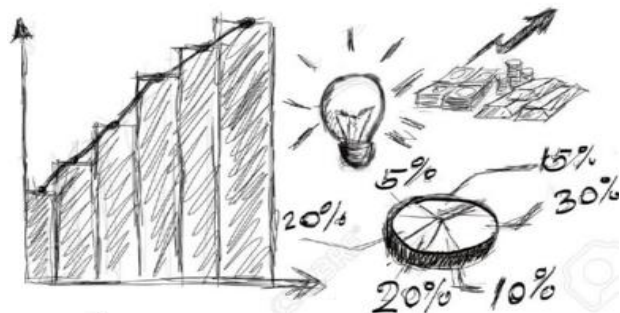

## Warehouse Services

We have long and successful relationships with major Japan retailers and so consequently, the vast majority of products we handle are imported require additional support from all around countries. This has led to H&P Logis Japan providing secure warehousing facilities and services for clients that require additional support.

## Global Air Services

H&P Logis Japan is able to draw on its proven performance as an air freight forwarder to select the most appropriate routes and the most suitable packing methods and transportation environments for each type of cargo.

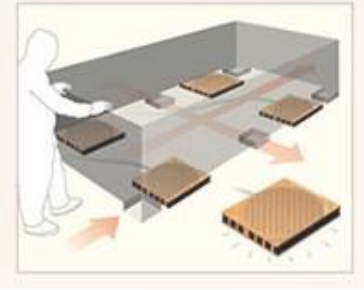

## H&P SPECIALTY 1

H&P can handle your most complex logistics needs including route surveys, semiconductor facilities, utility management, route improvements and pre-planning for the largest of projects and we can accommodate your delivery and logistics needs.

### Rigging out & Transportation

Air caster rigging systems provide a superior way to move loads of any size, shape or weight.

OR

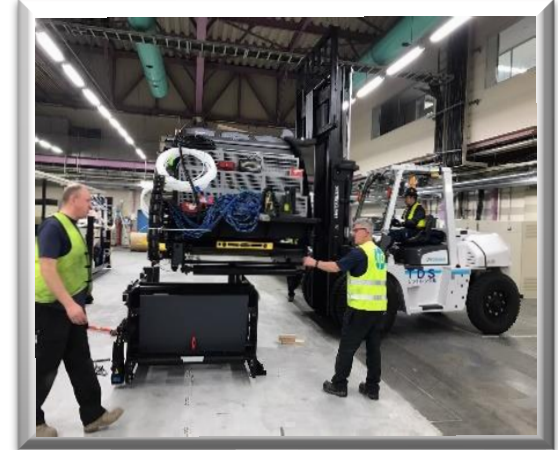

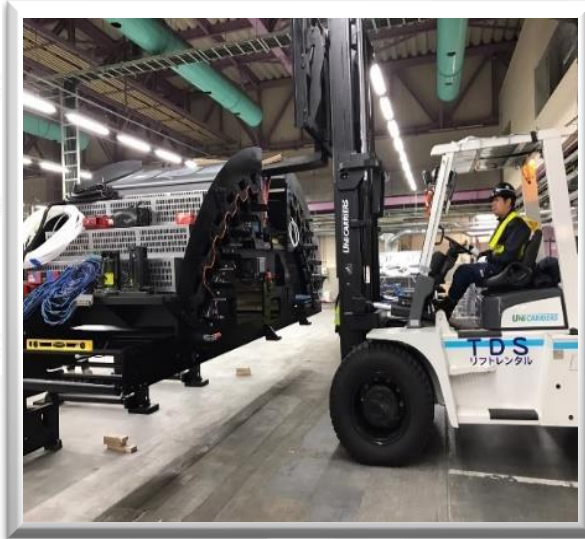

Air skates or crane lift, this versatile heavy load rigging product can be positioned under any load shape to provide support where needed

Anything fragile or anything that becomes volatile when exposed to shock or sudden movements will require air ride transport, in addition to other more standard precautions.

## H&P SPECIALTY 2

H&P provide rigging services to Customers who need to move heavy or specialized equipment or machinery from one location to another.

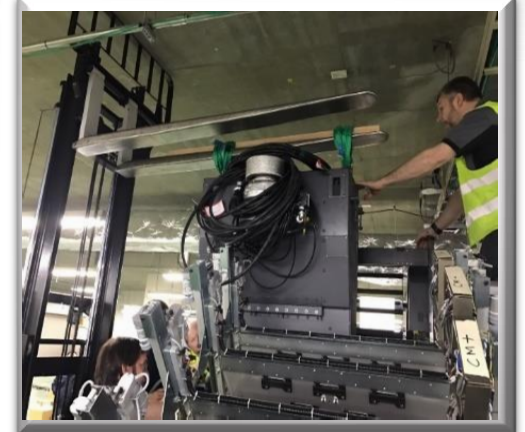

### Transportation Services

### Installation Support

### Rigging In

we support Moving and handling of sensitive machineries and equipment with the use of special rigging tools and methods to ensure the level of performance and safety using the most advanced techniques and technology in the rigging and logistics industry.

## H&P SPECIALTY 3

H&P believes in making every shipment as important to our delivery specialists as it is to you.

Transporting with Air Suspension

Anything fragile or anything that becomes volatile when exposed to shock or sudden movements will require air ride transport, in addition to other more standard precautions.

## Air Ride Trailer with Controlled Temperature

The Transportation of Temperature-sensitive Goods is handled by our team of experts. For the Transportation of Refrigerated containers we have available special trucks equipped with their own generator.

## H&P SPECIALTY 4

We're experts when it comes to shipping in containers. However, we're aware that occasionally your cargo may not fit into a standard container. This is why we offer the expertise and equipment to handle your out of gauge cargo.

### Break Bulk

Through several decades of experience, we have developed strong expertise within this segment.

### Out of Gauge

We can offer a large fleet of flat rack and open top containers along with specialists around the world to provide you with a first-class out of gauge service wherever and whenever you need it.

## H&P SPECIALTY 5

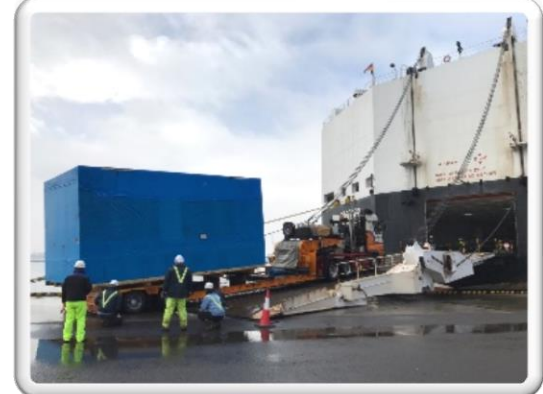

Our vessel charter service cover a range of vessel specifications including tugs, workboats, pontoon barges, crane barges, AHVs and multicats suitable for use in coastal and offshore waters.

### Vessel charter

RoRo (Roll On / Roll Off) is characterized as cargo entering the ship by its own power. Trucks, Machinery, Cars, Concrete mixer trucks, tractors, etc., all kinds of cargo that via a ramp, enters the vessel without the need for cranes for loading. The use of ramps facilitates the operations, making it all the more effective, faster and less risky process.

The Project Cargo, over-sized or heavy lift is characterized by excess weight or dimensions, which precludes their loading into containers requiring special equipment to climb on board vessels.

Depending on the project requirements, along with the vessel we can supply crew with specific experience to suit the work involved.

Browse through our fleet or search for a specific vessel to meet your project requirements.

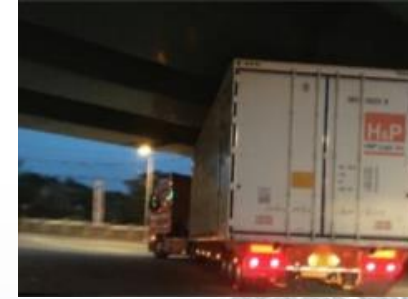

# H&P REFERENCES

We design the best available multimodal transport plan based on individual customer needs, which makes our service both unique and highly competitive.

Proper planning is the key to effective logistics.  
H&P's high value logistic experience has created a team of professionals who possess intimate knowledge and regulatory requirements on network, channels and shipping.
